

Event Log Scanner

Contributed by David Noel-Davies

How it works

will install an ActiveX control on your machine and analyse all the events in your security event log. After the analysis, it will present you with an HTML report (sample) with all the critical, high and medium security events found and a brief explanation of each. To perform the scan, you must download the ActiveX control to your machine. You will be prompted to download the GFI EventLogScan Service ActiveX Control. ', 'Select "Yes" to download and start the test.
